

# Getting Started

So you purchased a SmartSocket™ and you don't know where to begin in order to use it. You've come to the right place!

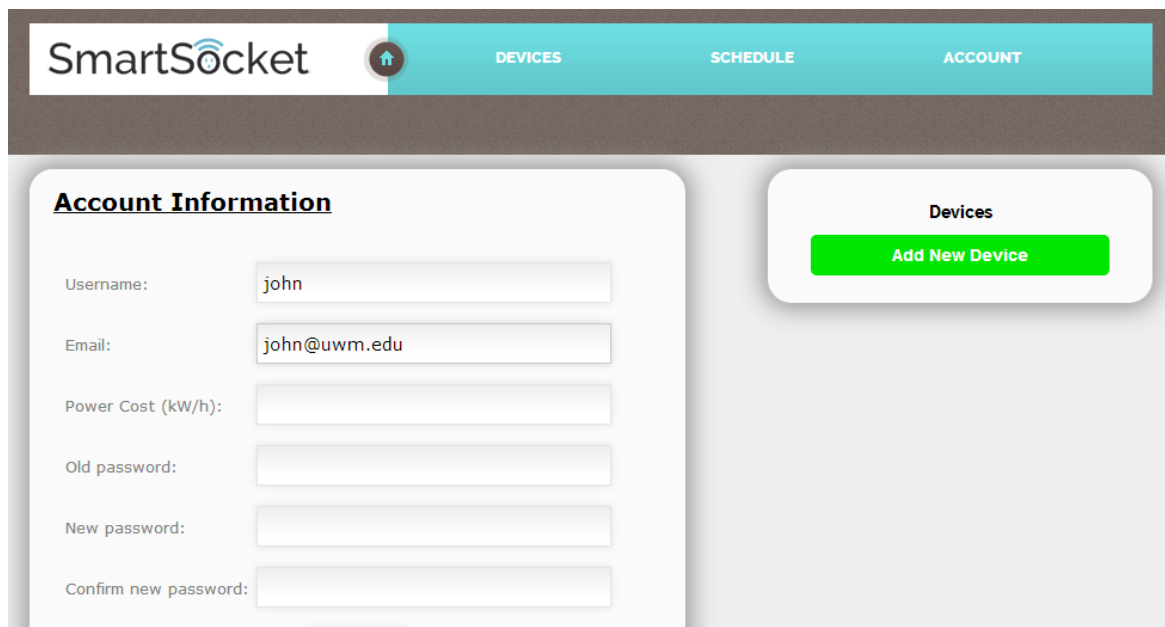

## Step 1: Adding a device

The first thing you will notice when logging in with your new username and password. is that the dashboard (Devices) page is blank.

This is how it should be because we have not added your device to your account yet!

In order to add a device we must navigate to the [Account](#) page. You can do this by clicking on the *Account* link in the navbar shown in the image above.

On the right-hand side of the account page you will see a **green** *Add New Device* button as seen in the image above. Click on this and it will take you to the page shown below.

The image shows a web interface for SmartSocket. At the top, there is a header with the SmartSocket logo on the left, a home icon in a circle in the center, and navigation links for 'DEVICES' and 'SCHE' on the right. Below the header is a white rounded rectangle containing the title 'New Device'. Underneath the title are four input fields: 'Device ID:', 'Nickname:', 'Max usage (kW/h):', and 'Max cost:'. Each field is represented by a light gray rectangular box. At the bottom center of this white box is a bright green button with the word 'Save' in white text.

You must now enter the information for this device so you can add it to your account.

**What is the Device ID?**

*caution: This is not something that you chose.*

The Device ID is the serial number of your purchased SmartSocket™. This can be found on the back of the device after unpacking the socket.

**What is the Nickname?**

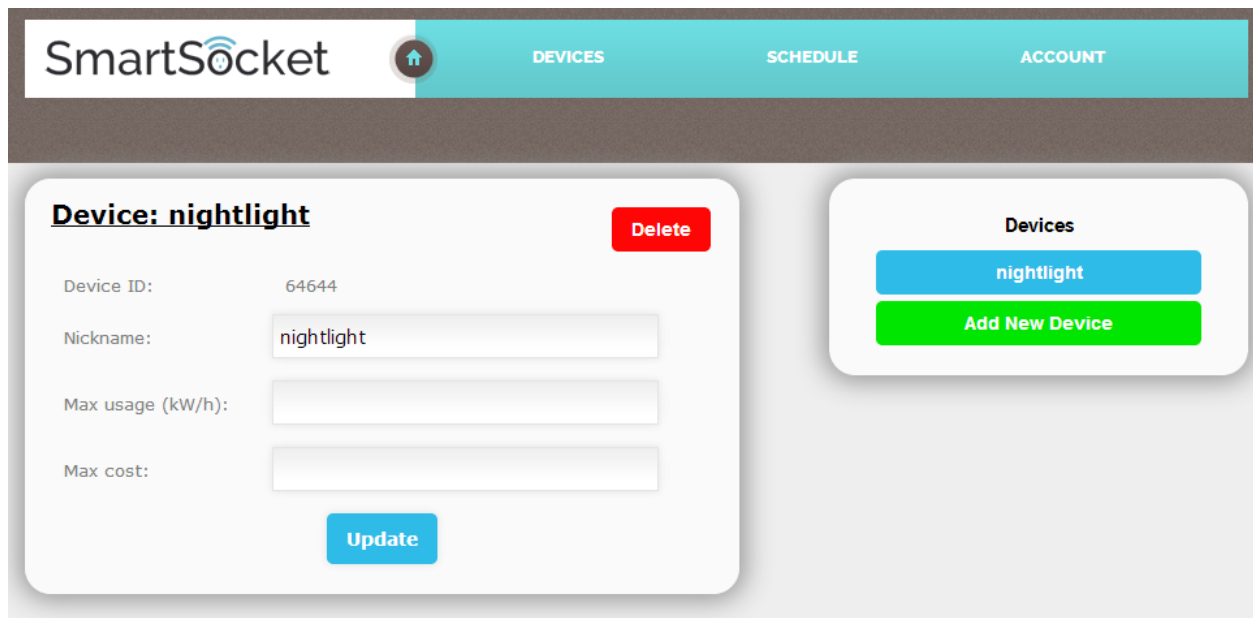

This is a name that you would like to refer to this device as. This way you do not need to refer to it by its serial number.

**What is the Max usage and Max cost?**

These are optional fields for this form. The *Max usage* will specify a value of [kW/h](#) for power so that if this socket reaches this much power usage it will automatically power off (if the device is setup to do so on the Dashboard). The *Mac cost* has the same function but regarding the cost of the power. So if you enter a value into this field it represents a dollar amount for the power the device consumes that you do not want the device to consume more than.

Once you have entered the necessary information click the **green** Save button. If successful you will be redirected to the deviceInfo page for your new device and will see the new device button in the right-hand sidebar column. This button (for later use) will take you to the

current page you are on. This is shown below. In this page you can edit the Nickname, Max usage, or Max cost that you entered earlier.

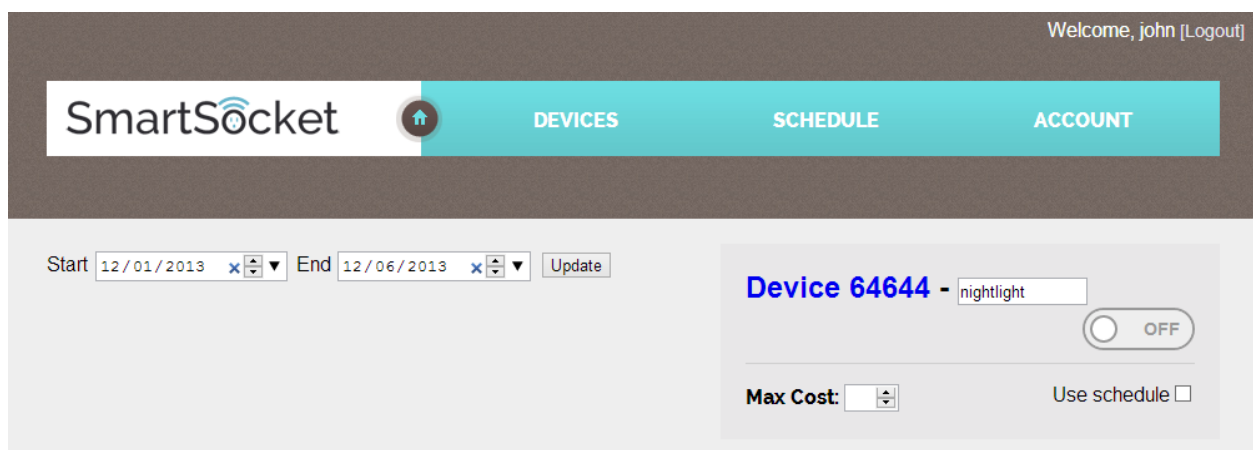

The image shows the SmartSocket web interface. At the top is a navigation bar with the SmartSocket logo and three tabs: DEVICES (active), SCHEDULE, and ACCOUNT. Below the navigation bar, there are two main panels. The left panel is titled 'Device: nightlight' and contains a 'Delete' button. Below this, there are four input fields: 'Device ID:' with the value '64644', 'Nickname:' with the value 'nightlight', 'Max usage (kW/h):', and 'Max cost:'. An 'Update' button is at the bottom of this panel. The right panel is titled 'Devices' and contains two buttons: 'nightlight' and 'Add New Device'.

Congratulations, You have added your first smart socket!

**ATTENTION:** If you experience errors the error will explain what information is wrong or missing.

Now you can click on the *Devices* link in the navbar which will bring you to the dashboard. You will now see your new device listed as shown below.

The image shows the SmartSocket dashboard. At the top right, it says 'Welcome, john [Logout]'. Below this is a navigation bar with the SmartSocket logo and three tabs: DEVICES (active), SCHEDULE, and ACCOUNT. Below the navigation bar, there is a date range selector with 'Start' and 'End' fields, both containing '12/01/2013' and '12/06/2013' respectively, and an 'Update' button. To the right of the date range selector, there is a section for 'Device 64644 - nightlight'. This section contains a toggle switch labeled 'OFF' and a 'Max Cost:' field with a dropdown arrow. Below the 'Max Cost:' field, there is a checkbox labeled 'Use schedule'.

Now you can also set scheduling events which will be discussed in the scheduling help document on the sidebar to the left of this document.
